

JACK STEELBERG

INTERFACE UPDATES · APP MODERNIZATION · AI-ACCELERATED BUILDS

Newport Beach, CA | (949) 294-9956 | jackwork716@gmail.com | LinkedIn: Jack Steelberg

Outdated software is my favorite kind. I take interfaces that feel ten years old and rebuild them to feel brand new, fast, using AI-accelerated workflows. Every project on my portfolio is a before-and-after.

EXPERIENCE

Founder & iOS Developer · RYZN 2026 – Present · Native Swift / SwiftUI

- Designed and built a complete native fitness app solo, every screen and every interaction, using AI-accelerated development (Claude + Xcode). **Approved on the App Store.**
- **Patent-pending calorie engine** that combines an individual's actual workout data with heart rate, making it 2-5x more accurate than the standard heart-rate-only method.
- **Live muscle map** that lights up muscle groups in real time as you train, plus lock-screen and Dynamic Island live workout tracking.
- **AI food logging:** point the camera at a plate or just describe the meal out loud; dual AI providers with automatic failover so a scan never dies.
- **NFC built into the product:** tap a RYZN tag and the app responds; the tag is both the product and the marketing channel.
- Full subscription business under the hood: paywall, free trial, monthly/annual plans. I also produced the launch ad films myself with a custom 3D-phone render pipeline.

Software Engineer (Part-Time) & Marketing Intern · Veritone Inc. 2025 – Present · Newport Beach, CA

- **Redesigned Veritone's Digital Media Hub**, enterprise media-asset-management software serving catalogs of 100,000+ assets, from a dated grid into a modern, fully clickable web app (React + TypeScript): asset browsing, AI discovery, upload center, orders, and a brand-theming manager.
- **Built the companion iOS app in native Swift**, with a live sync bridge so assets uploaded on desktop appear on the phone, after scrapping a cross-platform prototype because native runs cleaner and faster.
- Started on the marketing side: graphics and video for public announcements, then brought AI tooling into the team's workflow to cut production time, which grew into the engineering work above.

Game Developer · Everything Golf 2026 – Present · In Development

- Building a 3D golf game from scratch. Wrote a **procedural world generator** (Python + Blender) that builds an entire island course in code: a 1.5-mile island with cliffs, dunes, a ravine and lake, and an 18-hole, 4,400-meter course routing carved into the terrain with realistic grade limits, all regenerated deterministically at the push of a button.
- Built a **custom browser-based course editor** to paint and iterate on course layouts visually, plus a streaming system that splits the island per-hole so the game loads fast.
- Developing the **full brand alongside the game:** logo, character, and a stylized ad-scene series for launch marketing.

SELECTED WORK: BEFORE & AFTER

- **Live portfolio:** interface modernizations, rebuilds, and updates, with screenshots and live demos on the portfolio.
- **The offer:** if your software looks or feels outdated, that's exactly the kind of project I want to walk in and fix.

EDUCATION

B.S. Marketing · University of Arizona, Eller College of Management Class of 2027

- Sigma Nu Fraternity, Social Chairman (freshman-sophomore year); Running Club.

Diploma · Newport Harbor High School 2019 – 2023 · Newport Beach, CA

- 3.7 GPA · four years of Latin · freshman football.

SKILLS

Build: Swift / SwiftUI · Xcode · AI-assisted development (Claude) · web builds · UI/UX modernization
Create: graphic design · video production · social content · merch design
Hands-on: PC building · soldering · welding · metal work · automotive
